EDUCATION

Master of Science in Computer Science – California State Polytechnic University Pomona, USA - 3.48 GPA

May 2020

Bachelor of Engineering in Computer Engineering – University of Pune, India

May 2016

WORK EXPERIENCE

Ernst & Young – Software Engineer 2 – Key Backend Development projects

Feb 2022 - Present

➤ Fortune 100 Investment & Retirement Firm – Crypto Asset Management

- Implemented high-performance, scalable **Java Spring Boot APIs** to extend **portfolio management** capabilities for digital assets, **improving system performance by 30%** and supporting 100K+ client interactions daily.
- Managed **source control using Git**, ensuring proper **versioning and collaboration** across development teams
- Interacted with **Oracle SQL database using JPA** for efficient data persistence and retrieval across **1M+ transactional records**
- Designed and **delivered RESTful APIs with validations** in a cross-functional Agile team, meeting tight deadlines
- Component tested** features for **5+ microservices with 95% code coverage**, reducing QA feedback cycles by 30%
- Partnered with clients across multiple sprints to **shape feature scope and influence architecture** for key modules
- Collaborated with a cross-functional team to **develop a Kafka consumer microservice** that integrated investment data, enabling real-time, **scalable communication** between services and **improving processing speed by 40%**.
- Implemented unit and automated tests with **JUnit, Mockito, and Cucumber Serenity**, ensuring **80%+ coverage**
- Handled regular **CI/CD deployments using Jenkins and Urban Deploy** across 5+ environments
- Spearheaded **scalable product entitlement logic** to validate client permissions for crypto trading, enhancing security and **accuracy across 100K+ authorization flows** and **improving response time by 35%**
- Enhanced system resiliency by implementing **robust exception handling with retry and fallback** mechanisms, **reducing failure rates** by 40% during peak loads and **minimizing disruptions** across 5+ microservices
- Contributed to DB component development, collaborating with client-side data modelers, supporting 10+ schema updates

➤ Fortune 100 Credit Union Serving Military & Veterans –

- Pioneered the **design and implementation of 30+ APIs** for financial workflows and system integrations, with primary ownership over **greenfield development** and select legacy migrations
- Partnered with clients to refine requirements** and integrate feedback into **design decisions** across development iterations
- Gained hands-on **exposure to repository management, version control, & 15+ CI/CD deployments using Microsoft Azure**
- Authored **OpenAPI specifications** and automated API design publishing, enabling faster **QA handoffs** and improving collaboration across 5+ teams for all delivered APIs
- Handled QA feedback proactively, ensuring steady test cycles, on-time releases, and maintaining **80%+ JUnit test coverage**
- Conducted **peer code reviews** to ensure code quality, adherence to standards, and seamless integration

➤ Additional Projects & Contributions –

- Supported production on-call triaging with Datadog** and client tools; created and updated knowledge articles
- Assumed leadership role, presenting and **demonstrating project stories to clients** and EY team, earning trust and appreciation; **mentored EY Launch interns**, facilitating their onboarding and project assimilation.

Tata Consultancy Services – Software Engineer

2021-2022

- Built and deployed a MEAN stack grocery app on AWS with Git integration**, collaborating via Concord to complete team delivery during a 2+ month structured training program, **modern web architecture**, version control & collaborative delivery
- Contributed to the **modernization of legacy mainframe systems** for the Albertsons project using **Java Spring Boot and React**, improving system performance, response times, and maintainability across critical modules

Coding Minds Academy – Software Development Engineer

2020-2021

- Collaborated on the **development of an academic management system** serving 100+ students, leveraging **RESTful web services** in a team-based environment; tested and **validated 20+ API endpoints using Postman** and browser-based dev tools, ensuring full-stack functionality and reducing QA turnaround time
- Built a full-stack web app with React** (frontend) and **Spring Boot** (backend); deployed on **Heroku**, improving accessibility and performance for instructors and students

TECHNICAL SKILLS

- Programming Languages: Java, Python, C++, C
- Web Technologies: HTML5, CSS, JavaScript, TypeScript, React, Angular, Bootstrap
- Database: MySQL, SQL, Oracle SQL Developer, PostgreSQL, NoSQL
- Framework & Tools: Spring Boot, MVC, MEAN, JUnit, MySQL, Oracle SQL, REST, Git, Jenkins, Jira, Swagger, Docker, Mockito, Cucumber, Mural, Kafka, Postman, MongoDB, GraphQL, Maven, Microsoft Azure platform
- Professional Certifications: Java Programming, C Programming, Udemy certification for JavaScript

PROJECTS

- EY Employee Portal** – Contributed to the development of EY's internal employee portal, a full-stack application built with Java, Spring Boot, Angular, Git, and MySQL, using Azure DevOps Server to support CI/CD deployment
- Machine Learning Projects – Boston Housing & Facial Expression Recognition** – [GitHub](#) - Built a linear regression model on the Boston dataset (75% accuracy) using Python, NumPy, Pandas, and gradient descent algorithms; developed a CNN model with TensorFlow/Keras for facial expression recognition (76% test accuracy)
