EDUCATION

University at Buffalo, SUNY	Buffalo, NY
Master's Degree in Computer Science	Graduation Date: Dec 2025
Rajiv Gandhi Institute of Technology	Mumbai, India
Graduated with a Bachelor of Engineering in Information Technology	Graduation Date: May 2022

TECHNICAL SKILLS

Programming & Scripting: Python, Java, JavaScript, TypeScript, HTML
Backend & APIs: FastAPI, Node.js, REST APIs, Microservices
Cloud & DevOps: AWS (Lambda, DynamoDB, S3), Azure (Functions, Blob Storage), CI/CD, Serverless, Docker, Kubernetes
Databases: MySQL, MongoDB, DynamoDB
Machine Learning & AI: OpenAI GPT, Hugging Face, TensorFlow, YOLOv8, OCR (CRAFT), Pandas
Data Engineering & Analytics: Data Pipelines, Distributed Systems, Power BI, Tableau, Excel
Version Control & Collaboration: Git, GitHub

PROFESSIONAL EXPERIENCE

Minedco Holdings Inc. <i>Software Engineer Intern</i>	Leesburg, VA June 2025 - Aug 2025
- Built scalable backend pipelines with Azure Functions, Blob Storage, and serverless APIs to process millions of Facebook posts and images. - Integrated LLMs for automated classification, summarization, and chapter creation, delivering production-grade AI solutions. - Improved system throughput by 40% via parallelized data flows, asynchronous workloads, and FastAPI microservices. - Developed cloud-native infrastructure (Azure, AWS) and CI/CD pipelines for reliable, distributed deployments.	

Cybage Software Pvt. Ltd <i>Software Engineer</i>	Pune, India Jul 2022 - Jun 2024
- Designed and implemented scalable backend solutions using Node.js, AWS Lambda, and DynamoDB, improving system performance by 30% and reducing operational costs by 20%. - Developed and maintained data pipelines and storage systems with AWS DynamoDB, ensuring 99.9% uptime and enhanced data security compliance. - Collaborated with GroupM to deliver advanced data analytics and PowerBI dashboards, accelerating decision-making by 25% and optimizing resource allocation. - Integrated Google Ads and Meta Ads data to improve visibility across 50+ digital campaigns, contributing to a 15% increase in overall marketing efficiency. - Resolved 80% of critical backend issues and deployed fault-tolerant systems serving over 100,000 users, improving stability and user experience across multiple client platforms.	

PROJECTS

AI Document Search (RAG Chatbot) | React, FastAPI, LangChain, Pinecone/FAISS, Docker, Vercel

- Built a full-stack “Chat with PDFs” system enabling users to upload documents and query them via a retrieval-augmented generation (RAG) pipeline with semantic search, LLM orchestration, and citation-backed answers.
- Engineered end-to-end data pipelines: text extraction, embedding generation (OpenAI), vector search (FAISS/Pinecone), and token-efficient answer generation with LangChain.
- Deployed frontend on Vercel and backend as a Dockerized FastAPI service with CI/CD, monitoring, and observability. Achieved retrieval latency under 800 ms, first-token response in under 2.5 s, and 99.9% processing reliability.
- Implemented advanced features including streaming token responses, reranking, caching (30–50% cost savings), recall@5 of at least 0.85, and hallucination rate below 5%, showcasing reliability, scalability, and MLOps best practices.

Facebook Profile Archival & AI Storytelling Platform | Python, FastAPI, Azure Functions, Azure Blob Storage, OpenAI GPT, Stripe Checkout

- Built a SaaS platform to archive complete Facebook profiles (posts, images, metadata) using Azure Blob Storage & Functions, with pipelines for media extraction, signed URLs, and secure scalable backups.
- Developed an AI-powered scrapbook generator (LLM narratives, Dense Captioning, OCR/CRAFT, YOLOv8) and integrated Stripe Checkout for \$9.99 monetization, with reliability features (retry logic, error handling, session persistence).
